Flashcards have been used as a learning tool since the 19th century, with their roots traced back to Germany.

005

Spaced repetition involves reviewing flashcards at increasing intervals over time, allowing for optimal memory retention.

002

Sebastian Leitner is credited with popularizing the use of flashcards as a learning technique in his book 'So lernst man lernen' (How to Learn to Learn) in 1972.

006

Flashcards promote active recall, help in organizing information, and facilitate spaced repetition, leading to efficient learning and retention.

003

The Leitner system is a spaced repetition technique used with flashcards, involving the review of cards at increasing intervals to optimize long-term retention.

007

Flashcards are commonly used in language learning to practice vocabulary, grammar rules, and sentence structures, aiding in memorization and fluency development.

004

Flashcards can be used effectively by actively engaging with the material, practicing retrieval, and spacing out study sessions over time.

008

Effective ways to use flashcards for studying include creating clear and concise questions, reviewing cards regularly, and incorporating spaced repetition techniques.
